#### **Features:**

Ц	4 CWDM lanes MUX/DEMUX design
	Up to 11.2Gbps per channel bandwidth
	Aggregate bandwidth of > 40Gbps
	Duplex LC connector
	Compliant with 40G Ethernet IEEE802.3ba and 40GBASE-ER4 Standard
	QSFP MSA compliant
	APD photo-detector
	Up to 40 km transmission
	Compliant with QDR/DDR Infiniband data rates
	Single +3.3V power supply operating
	Built-in digital diagnostic functions
	Temperature range 0°C to 70°C
	RoHS Compliant Part

### **Applications:**

_		
Ш	Rack to	n rack

- Data centers Switches and Routers
- ☐ Metro networks
- ☐ Switches and Routers
- ☐ 40G BASE-ER4 Ethernet Links

### **Description:**

The TQPL40D is a transceiver module designed for 40km optical communication applications. The design is compliant to 40GBASE-ER4 of the IEEE P802.3ba standard. The module converts 4 inputs channels of 10Gb/s electrical data to 4 CWDM optical signals, and multiplexes them into a single channel for 40Gb/s optical transmission. Reversely, on the receiver side, the module optically de-multiplexes a 40Gb/s input into 4 CWDM channels signals, and converts them to 4 channel output electrical data.

The central wavelengths of the 4 CWDM channels are 1271, 1291, 1311 and 1331 nm as members of the CWDM wavelength grid defined in ITU-T G694.2. It contains a duplex LC connector for the optical interface and a 38-pin connector for the electrical interface. To minimize the optical

dispersion in the long-haul system, single-mode fiber (SMF) has to be applied in this module.

The product is designed with form factor, optical/electrical connection and digital diagnostic interface according to the QSFP Multi-Source Agreement (MSA). It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference. The module operates from a single +3.3V power supply and LVCMOS/LVTTL global control signals such as Module Present, Reset, Interrupt and Low Power Mode are available with the modules. A 2-wire serial interface is available to send and receive more complex control signals and to obtain digital diagnostic information. Individual channels can be addressed and unused channels can be shut down for maximum design flexibility.

The TQP10 is designed with form factor, optical/electrical connection and digital diagnostic interface according to the QSFP Multi-Source Agreement (MSA). It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference. The module offers very high functionality and feature integration, accessible via a two-wire serial interface.

### Absolute Maximum Ratings

Parameter	Symbol	Min.	Typical	Max.	Unit
Storage Temperature	Ts	-40		+85	°C
Supply Voltage	VccT, R	-0.5		4	V
Relative Humidity	RH	0		85	%

### **☐** Recommended Operating Environment:

Parameter	Symbol	Min.	Typical	Max.	Unit

### ☐ Diagnostic Monitoring Interface

Digital diagnostics monitoring function is available on all QSFP+ ER4. A 2-wire serial interface provides user to contact with module. The structure of the memory is shown in flowing. The memory space is arranged into a lower, single page, address space of 128 bytes and multiple upper address space pages. This structure permits timely access to addresses in the lower page, such as Interrupt Flags and Monitors. Less time critical time entries, such as serial ID information and threshold settings, are available with the Page Select function. The interface address used is A0xh and is mainly used for time critical data like interrupt handling in order to enable a one-time-read for all data related to an interrupt situation. After an interrupt, IntL has been asserted, the host can read out the flag field to determine the affected channel and type of flag.

Byte Address	Description	Туре
	Identifier (1 Byte)	Read Only
1-2	Status (2 Bytes)	Read Only
3-21	Interrupt Flags (3 Bytes)	Read Only

168-183	16	Vendor PN	Part number: TQPL40D (ASCII)			
184-185	2	Vendor rev	Revision level for part number provided by vendor (ASCII) (X1)			
186-187	2	Wave length or Copper cable Attenuation	Nominal laser wavelength (wavelength=value/20 in nm) or copper cable attenuation in dB at 2.5GHz (Adrs 186) and 5.0GHz (Adrs 187) (65A4=1301)			
188-189	2	Wavelength tolerance	Guaranteed range of laser wavelength(+/- value) from nominal wavelength. (wavelength Tol.=value/200 in nm) (1C84=36.5)			
190	1	Max case temp.	Maxinum case temperature in degrees C (70)			
191	1	CC_BASE	Check code for base ID fields (addresses 128-190)			

Extended	xtended ID fields					
192-195	4	Options	Rate Select, TX Disable, Tx Fault, LOS, Warning indicators for: Temperature, VCC, RX, power, TX Bias			
196-211	16	Vendor SN	Serial number provided by vendor (ASCII)			
212-219	8	Date Code	Vendor's manufacturering date code			
220	1	Diagnostic Monitoring Type	Indicates which types of diagnostic monitoring are implemented (if any) in the Module. Bit 1, 0 Reserved (8=Average Power)			
221	1	Enhanced Options	Indicates which optional enhanced features are implemented in the Module.			
222	1	Reserved				
223	1	CC_EXT	Check code for the Extended ID Fields (addresses 192-222)			
Vendor S	Vendor Specific ID Fields					
224-255	-255 32 Vendor Specific EEPROM					

# ☐ Timing for Soft Control and Status Functions

Parameter	Symbol	Max	Unit	Conditions	
Initialization Time	t_init	2000	ms	Time from power on1, hot plug or rising edge of Reset until the module is fully functional2	
Reset Init Assert Time	t_reset_init	2	μs	A Reset is generated by a low level longer than the minimum reset pulse time present on the ResetL pin.	
Serial Bus Hardware Ready Time	t_serial	2000	ms	Time from power on1 until module responds to data transmission over the 2-wire serial bus	
Monitor Data Ready Time	t_data	2000	ms	Time from power on1 to data not ready, bit 0 of Byte 2, deasserted and IntL asserted	
Reset Assert Time	t_reset	2000	ms	Time from rising edge on the ResetL pin until the module is fully functional2	
LPMode Assert Time	ton_LPMode	100	μs	Time from assertion of LPMode (Vin:LPMode =Vih) until module power consumption enters lower Power Level	
IntL Assert Time	ton_IntL	200	ms	Time from occurrence of condition triggering IntL until Vout:IntL = Vol	
IntL Deassert Time	toff_IntL	500	μs	toff_IntL 500 µs Time from clear on read3 operation of associated flag until Vout:IntL = Voh. This includes deassert times for Rx LOS Tx Fault and other flag bits.	

Rx LOS Assert Time	ton_los	100	ms	Time from Rx LOS state to Rx LOS bit set and IntL asserted	
Flag Assert Time	ton_flag	200	ms	Time from occurrence of condition triggering flag to associated flag bit set and IntL asserted	
Mask Assert Time	ton_mask 100 ms Time from mask bit set4 until association is inhibited		Time from mask bit set4 until associated IntL assertion is inhibited		
Mask De-assert Time	toff_mask	100	ms	Time from mask bit cleared4 until associated IntlL operation resumes	
ModSelL Assert Time	ton_ModSel L	100	μs	Time from assertion of ModSelL until module responds to data transmission over the 2-wire serial bus	
ModSelL Deassert Time	toff_ModSel L	100	μs	Time from deassertion of ModSelL until the module does not respond to data transmission over the 2-wire serial bus	
Power_over-ride or Power-set Assert Time	ton_Pdown	100	ms	Time from P_Down bit set 4 until module power consumption enters lower Power Level	
Power_over-ride or Power-set De-assert Time	toff_Pdown	300	ms	Time from P_Down bit cleared4 until the module is fully functional3	

#### Note:

- 1. Power on is defined as the instant when supply voltages reach and remain at or above the minimum specified value.
- 2. Fully functional is defined as IntL asserted due to data not ready bit, bit 0 byte 2 de-asserted.
- 3. Measured from falling clock edge after stop bit of read transaction.
- 4. Measured from falling clock edge after stop bit of write transaction.

#### Notes:

- GND is the symbol for single and supply(power) common for QSFP modules, All are common within the QSFP module and all module voltages are referenced to this potential otherwise noted. Connect these directly to the host board signal common ground plane. Laser output disabled on TDIS >2.0V or open, enabled on TDIS <0.8V.</li>
- 2. VccRx, Vcc1 and VccTx are the receiver and transmitter power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown below. VccRx, Vcc1 and VccTx may be internally connected within the QSFP transceiver module in any combination. The connector pins are each rated for maximum current of 500mA.
